

Partie 02 — Corrigé

Comprendre, importer et explorer des données

Oskar Laverny

Table des matières

Exercice 1	1
Exercice 2	1
Exercice 3	1
Exercice 4	2

Exercice 1

```
age <- c(24, 31, 52, 67, 45, NA)
length(age)
age[c(1, 4)]
age[age >= 50 & !is.na(age)]
sum(is.na(age))
mean(age, na.rm = TRUE)
```

Exercice 2

```
patients <- readr::read_csv("patients.csv")
head(patients)
dim(patients)
names(patients)
dplyr::glimpse(patients)
summary(patients)
colSums(is.na(patients))
```

Exercice 3

```
patients$age
patients[["age"]]
patients[, "age"]

patients[1:10, ]
patients[, c("id", "age", "sexe", "tas")]

senior <- patients[patients$age >= 65, ]
mean(senior$age)
```

Exercise 4

```
m <- matrix(1:12, nrow = 3)
m[2, 3]

profil <- list(
  prenom = "Camille",
  age = 40,
  notes = c(14, 16, 13)
)

groupe <- factor(c("A", "B", "A", "C"))
levels(groupe)
```
